Info: ref – fig1

The Kurtosis and Skewness analysis is as follows:

SSC Percentage (ssc_p)

- The **Skewness** value for SSC Percentage is **-0.133**.
- Since the skewness value is close to **0**, the data is approximately symmetric.
- The negative skewness indicates a slight left-skewed distribution.
- The **Kurtosis** value is **-0.608**.
- Since the kurtosis value is less than **0**, the distribution is **Platykurtic**.
- Therefore, the SSC Percentage data is approximately symmetric with a flatter peak than a normal distribution.

HSC Percentage (hsc_p)

- The **Skewness** value for HSC Percentage is **0.163**.
- Since the skewness value is close to **0**, the data is approximately symmetric.
- The positive skewness indicates a slight right-skewed distribution.
- The **Kurtosis** value is **0.087**.
- Since the kurtosis value is close to **0**, the distribution is approximately **Mesokurtic**.
- Therefore, the HSC Percentage data is nearly normally distributed.

Degree Percentage (degree_p)

- The **Skewness** value for Degree Percentage is **0.204**.
- Since the skewness value is close to **0**, the data is approximately symmetric.
- The positive skewness indicates a slight right-skewed distribution.
- The **Kurtosis** value is **-0.097**.
- Since the kurtosis value is slightly less than **0**, the distribution is **Platykurtic**.
- Therefore, the Degree Percentage data is approximately symmetric with a slightly flatter peak than a normal distribution.

Entrance Test Percentage (etest_p)

- The **Skewness** value for Employability Test Percentage is **0.282**.
- Since the skewness value is close to **0**, the data is approximately symmetric.
- The positive skewness indicates a slight right-skewed distribution.
- The **Kurtosis** value is **-1.089**.
- Since the kurtosis value is considerably less than **0**, the distribution is **Platykurtic**.
- Therefore, the Employability Test Percentage data has a flatter distribution compared to a normal distribution.

•

MBA Percentage (mba_p)

- The **Skewness** value for MBA Percentage is **0.314**.
- Since the skewness value is close to **0**, the data is approximately symmetric.
- The positive skewness indicates a slight right-skewed distribution.
- The **Kurtosis** value is **-0.471**.
- Since the kurtosis value is less than **0**, the distribution is **Platykurtic**.
- Therefore, the MBA Percentage data has a flatter peak than a normal distribution.

Salary

- The **Skewness** value for Salary is **0.807**.
- Since the skewness value is greater than **0.5**, the data is moderately right-skewed.
- This indicates that higher salary values are more spread out than lower salary values.
- The **Kurtosis** value is **-0.240**.
- Since the kurtosis value is less than **0**, the distribution is **Platykurtic**.
- Therefore, the Salary data shows moderate positive skewness with a flatter peak than a normal distribution.
