

Problem Statements of Anova

- 1.** A researcher collected exam scores of students taught via Online, Offline, and Hybrid methods. Find the analysis of variance to determine whether the teaching method has a significant effect on student performance
- 2.** A nutritionist recorded the weight loss (in kg) of patients following Keto, Vegan, and Mediterranean diets for 3 months. Find the analysis of variance to check whether the type of diet significantly affects weight loss.
- 3.** The placement salary of MBA students was recorded based on their gender (Male, Female) and specialisation (Marketing, Finance, HR). Find the analysis of variance to examine the individual and combined effect of gender and specialisation on placement salary.
- 4.** An agriculture researcher measured crop yield (in kg) for different combinations of fertilizer type (Organic, Chemical, None) and watering frequency (Daily, Weekly). Find the analysis of variance to test whether fertilizer type and watering frequency significantly influence crop yield.
- 5.** A clinical study recorded the reduction in systolic blood pressure of patients across different drug dosage levels (Low, Medium, High) and age groups (Young, Middle-aged, Senior). Find the analysis of variance to determine whether dosage and age group have a significant effect on blood pressure reduction.
